

National Marrow Donor Program®

Transplants by Disease Category at Each U.S. Transplant Center

Inherited Metabolic Disorders

This list includes *unrelated donor* marrow, peripheral blood stem cell (PBSC) and cord blood transplants coordinated by the National Marrow Donor Program® (NMDP) as of September 30, 2007. A transplant center may have also performed transplants using related donors (family members) or donors from other registries. Please consult *Choosing a Transplant Center: A Patient's Guide* (Transplant Center Directory) or contact the transplant center directly for more details.

This table provides the total number of unrelated donor transplants (marrow, PBSC and cord blood) using donors from the NMDP Registry at each U.S. transplant center. This data is cumulative from the date the center joined the NMDP. We encourage you to use this table as a basis for questions and discussion when you speak with the Transplant Center Coordinator.

These numbers are provided for general use. They are not intended to be used as a basis to predict any individual patient's transplant outcome or used as an indication of the transplant center's expertise level.

The information in this chart is updated quarterly. To order the print version of *Choosing a Transplant Center: A Patient's Guide*, call 1 (888) 999-6743 or request via our Web site at www.marrow.org/request. The directory provides more detail about each transplant center.
